

After logging into CM/ECF, the new menu item displays on the Utilities menu:

New Check PDF Document Utility

A new utility, Check PDF Document, is available for filers to check whether a PDF document is valid before filing a document. Once selected, the screen below displays, allowing the user to browse and select any PDF document from his/her file system.

Once the Open button is selected, a confirmation message displays indicating the status of the PDF.

If the document does not meet requirements, an error message displays describing the problem.

The CM/ECF filer should manually verify that all electronic signatures in the PDF documents are valid signatures.
